Muhammad Saleh

DevOps Engineer | AI

salehktk9@gmail.com | GitHub | LinkedIn

Professional Summary

DevOps Engineer with 3.5+ years building and operating AWS cloud-native platforms (EKS, Terraform, CI/CD, GitOps, Kubernetes, observability). Reduced production deployment time from 20 to 7 minutes at Cortex by optimizing CI/CD pipelines and Docker builds.

Technical Skills

AI & LLM: LLM APIs, OpenAI-compatible APIs, OpenRouter, Prompt Engineering, Embeddings, Semantic Search, Retrieval-Augmented Generation (RAG), Vector Search, AI Agents, Tool Calling, LLM Evaluation

AI Frameworks & Backend: Python, FastAPI, REST APIs, Flask API

Vector & Data: Qdrant, PostgreSQL, Redis, MySQL, MongoDB

Cloud: AWS (EKS, ECR, RDS, ElastiCache, IAM, SNS, SQS, CloudWatch), GCP

DevOps & Infrastructure: Docker, Kubernetes, Helm, Terraform, Argo CD, GitHub Actions, Jenkins, Linux, Agile, Scrum

Observability & Security: Prometheus, Grafana, Alertmanager, CloudWatch, Trivy, SonarQube, OWASP Dependency Check

Education

BS Software Engineering
Institute of Management Sciences (IMSciences), Peshawar

Experience

DevOps Engineer Jul 2025 – Present
Cortex *Remote*

- Manage production AWS infrastructure via reusable Terraform modules: VPC, EKS, RDS, IAM, load balancers.
- Build and optimize CI/CD pipelines (GitHub Actions, Jenkins) with Trivy/SonarQube scanning; cut average deployment time from 20 to 7 minutes.
- Operate microservices on Amazon EKS with Helm: health checks, HPA autoscaling, RBAC, rolling deployments.
- Implement GitOps deployments with Argo CD across dev/staging/prod; provision new environments via Terraform.
- Centralize monitoring with Prometheus, Grafana, Alertmanager, CloudWatch; on-call rotation, root-cause analysis, database backup and recovery.

DevOps Engineer Mar 2024 – Jul 2025
Parallax Labs *Remote*

- Provision and automate local Kubernetes cluster lifecycle management with Terraform for development environments.
- Deploy containerized microservices to Kubernetes using raw manifests and reusable Helm charts.
- Secure service-to-service communication with Istio (mTLS) and configure Kong API Gateway for ingress, authentication, and rate limiting.
- Build CI/CD pipelines with GitHub Actions, integrating automated testing, image builds, and registry deployments.

Junior Cloud Engineer Feb 2023 – Jan 2024
GenCloud *Remote*

- Provisioned AWS cloud resources with Terraform (IaC); containerized applications with Docker and deployed to Kubernetes.
- Automated CI/CD workflows with GitHub Actions and Jenkins; monitored infrastructure with Prometheus and Grafana.

Projects

SwiftMart – Cloud-Native E-Commerce Platform GitHub
AWS (EKS, ECR, RDS, ElastiCache, SNS/SQS), Terraform, GitHub Actions, Argo CD, Helm

- Architected a production-style e-commerce platform on AWS using a five-service microservices design.
- Provisioned complete cloud infrastructure with Terraform, including EKS, VPC, RDS PostgreSQL, ElastiCache Redis, IAM/IRSA, SNS/SQS, and CloudWatch.
- Built a secure GitHub Actions CI/CD pipeline with Trivy scanning, Amazon ECR publishing, and Argo CD GitOps deployments, authenticated via GitHub OIDC for keyless AWS access.
- Designed an event-driven Order-Notification workflow with SNS/SQS and implemented full observability using Prometheus, Grafana, Alertmanager, and CloudWatch Logs.

LLM Gateway and Model Evaluation Platform GitHub
FastAPI, OpenRouter, PostgreSQL, Prometheus, Grafana, Docker, Kubernetes, GitHub Actions

- Built an LLM gateway that routes chat requests through OpenRouter and compares 2–8 models on the same prompt.
- Implemented tracking for latency, input/output/total tokens, estimated cost, success state, and heuristic quality scores.
- Persisted request/evaluation history in PostgreSQL and exposed operational metrics for Prometheus/Grafana; added Docker, Kubernetes, automated tests, and GitHub Actions.

Leadership & Volunteer Experience

Founding Lead
AWS Student Builder Group Lead, IMSciences
